

Lash & Brow Treatment Pre & Post Care

Pre- Treatment

- If you have an event, book your treatment 2-4 days before the event to ensure the hair follicles have enough time to close and the skin to calm down.
- Avoid applying products to the desired waxed area, such as make-up, lotions, self-tan etc
- Discontinue use of vitamin A 7 days before waxing

What To Expect

- After your treatment, you may expect the area to be red, some may experience blood spots due to thicker courser hair, and the area may feel tender and tingle.

Post Treatment

- Avoid touching or scratching the waxed area.
- Avoid exfoliating the waxed area.
- Avoid hot water; we suggest you shower at a colder temperature.
- Avoid saunas, steam rooms, sweating (exercise/ gyms), and swimming. Sweat can infect open hair follicles, and heat can irritate the waxed area.
- Avoid sunbathing, sunbeds, sunlight or UV exposure.
- Keep the waxed area clean and dry for 48 hours after your appointment.

Tints, Henna & Hybrid

- Avoid wetting the area for 48 hours to allow the tint/ henna/ hybrid to properly stain your skin and hair. Wetting or scrubbing them will reduce the longevity of the treatment.

Lash Lift & Brow Lamination

- Avoid wetting the area for 48hours after treatment
- Avoid heat and steam (hot water, hair dryer, heater, opening over doors etc.). Heat can reduce the curl of the lash.
- Brush brows and lashes daily to ensure the desired look, as daily life may change the direction of the hair, for example, sleeping.
- Lash lift and brow lamination is a chemical treatment; therefore, maintaining the health of lashes and brows is essential. In addition, we recommend using a lash/ brow growth serum to promote longer and thicker hairs.
- Purely Lashes Growth Serum combines four different peptides and a range of natural extracts to stimulate lash and brow growth to provide healthier, more robust, longer lashes.
